

# A direct line. A private line.

**PrivateLine™**  
PRIVATE DID SERVER

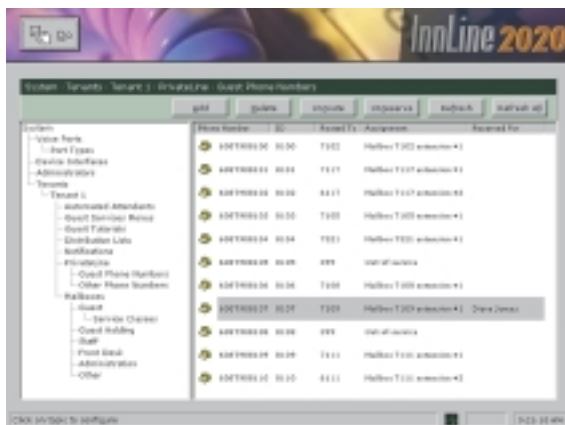

**It's convenient.** It's private. It's direct. And, it requires no staff intervention.

**PrivateLine** and your *Innovation* system turn guest rooms into business-ready remote offices. Guests may be assigned up to three numbers — phone, data, fax — that connect directly to their room. And, frequent guests can reserve specific numbers for consistency during future stays.

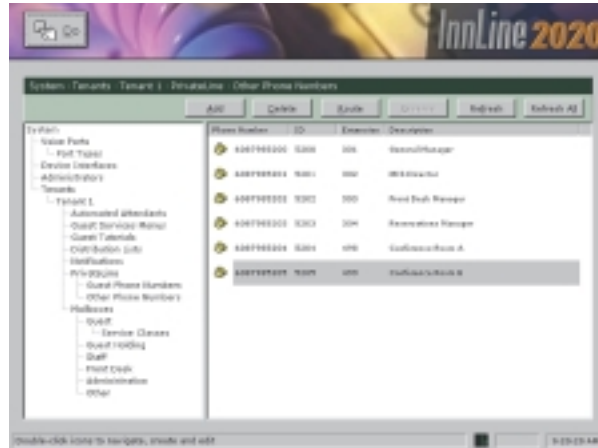

Guests will feel right at home with business cards listing their personal numbers. They can also access information about their private lines through *Innovation's* Automated Guest Services (AGS).

When integrated with *InnCommand*, **PrivateLine** allows faxes to be routed to specially assigned extensions with no staff intervention at all.

And that's what it's all about. Increase guest privacy and convenience, while reducing your general call volume.

*Guests will enjoy the privacy and convenience, you'll like managing fewer calls*

*PrivateLine's interface makes it easy to manage your guests' personal lines*
